## AMBASSADOR POOLS

MAKING LEISURE A PLEASURE

### Leaking Pool

A simple test which can be completed by you, the customer, at no cost.

1. Fill pool to top of skimmer and mark on the face plate where the water comes up to
2. Run the filter pump for 24 hours and mark the loss
3. Leave the filter pump off for 24 hours and mark the loss; this will give you the water loss. (Remember not to backwash; also monitor any rainfall, which may alter the water level)
4. If the Water loss is the same on both tests it is likely to be the pool shell, fittings, liner or hydrostatic sump valve
5. If the loss is greater with the filter pump running, it is most likely to be the backwash waste line, a leak in the plant room or heating equipment or in the flow and return pipelines. You can do a visual inspection of this equipment.

Once this preliminary check has been completed contact Ambassador Pools, who have over 30 years experience in detecting and rectifying this type of problem.

### TESTING POOL FOR LEAKS IN LINER POOLS

Pressure testing pipe lines, Inlets, Vacuumed Points, Skimmers and low suction only (All fittings must be able to be treaded or plugged)

If pool has Main Drain, the requirements for Pressure Testing vary and cost may differ from Draining Pools to using a diver .

Testing Liners for leaks using specialized Ultrasonic Leak Detector.

If Scuba Diving is required for Underwater work, the cost is **£150.00** for the first hour and thereafter **£50.00** per half-hour.

Once we have established the leak or leaks, a full report will be issued and a comprehensive quotation for the repairs provided.
